

## LSB134 LED Star Heat Sink ø 134mm

### Features & Benefits

- Designed for high-performance convection cooling of power LEDs, COB modules and LED engines
- Thermal resistance Rth 1.16°C/W  
 Cooling performance up to 43W (see thermal details)
- Diameter 134 mm base
- Standard height 50 mm  
 Other heights on request
- Standard base thickness 10 mm  
 Other base thicknesses on request  
 Easy base plate customisation with mounting holes, cable guidance, reflector mounting options,...
- Extruded from highly conductive aluminium for optimal thermal performance  
 Base plate design for advanced heat conduction and lower spreading resistance
- Standard colors clear anodised - black anodised

### Order Information

#### Thermal Interface Material

Please make sure to apply a high thermal conductive material between the heat sink base and the LED engine with an applied thickness between 0.1mm and 0.2mm

Advised materials:

- **Thermally Conductive Grease**  
 High performance, more difficult to apply and control the thickness  
 Example Laird Technologies Tgrease 880
- **Thermal Gap Filler Pad with electrical insulation**  
 Medium to high performance, easy to apply  
 Example Laird Technologies Tgard 500-A1
- **Phase Change Thermal Interface Material**  
 This material applies like a thermal pad but becomes fluid and creates a perfect wetting at the first heating cycle  
 Extra high performance, easy to apply  
 Example Laird Technologies TPCM 585

Not using a suitable thermal conductive material will lead to either an insufficient wetting area or a high thermal resistance between LED engine and heat sink base both immediately resulting in an extra temperature increase of the LED junction

We do not advise the use of double sided thermal tapes without using extra mounting screws to create pressure

Thermal gap filler pads and phase change pads can be pre-applied by MechaTronix with specific cutting designs

Example: LSB13450-B

LSB134 **1** - **2** - **3**

- 1** Height (mm)
- 2** Anodising Color  
 B - Black  
 C - Clear
- 3** Mounting options  
 On request:  
 mounting holes, cable holes,  
 screw thread, thermal interface pad

## LSB134 LED Star Heat Sink ø 134mm

### Product Details

**Model n°**

**LSB13450**

Dimension (mm) <sup>*1</sup>	ø134 x h50
Volume (mm <sup>3</sup> )	340735.56
Cooling Surface (mm <sup>2</sup> )	147871.05
Weight (gr)	917.15
Thermal Resistance (°C/W) <sup>*2</sup>	1.16
Power Pd (W) <sup>*3</sup>	43
Heat Sink Material	AL6063-T5

\*1 3D files are available in ParaSolid, STP and IGS on request

\*2 The thermal resistance Rth is determined with a calibrated heat source of 30mm x 30mm central placed on the heat sink, Tamb 40° and an open environment.

Reference data @ heat sink to ambient temperature rise Ths-amb 50°C

The thermal resistance of a LED cooler is not a fix value and will vary with the applied dissipated power Pd

\*3 Dissipated power Pd. Reference data @ heat sink to ambient temperature rise Ths-amb 50°C

The maximal dissipated power needs to be verified in function of required case temperature Tc or junction temperature Tj and related to the estimated ambient temperature where the light fixture will be placed

Please be aware the dissipated power Pd is not the same as the electrical power Pe of a LED module

To calculate the dissipated power please use the following formula:  $Pd = Pe \times (1 - \eta L)$

Pd - Dissipated power

Pe - Electrical power

$\eta L$  = Light efficiency of the LED module

#### Notes:

- MechaTronix reserves the right to change products or specifications without prior notice.
- Mentioned models are an extraction of full product range.
- For specific mechanical adaptations please contact MechaTronix.

## LSB134 LED Star Heat Sink $\phi$ 134mm

### Drawings & Dimensions

### Example: LSB13450

### Mounting Option Examples

The major advantage of these LED star heat sinks with additional base plate is the easy adaptation of the base plate to specific mounting patterns for various LED engines and optics

With some easy CNC afterwork we can go from simple mounting holes all the way up to a full customised LED cooler where the heat sink becomes part of the lighting fixture

Thermal interface

Outer screw thread

Cable hole + Outer screw thread

### Examples of customised LED star heat sinks:

## LSB134 LED Star Heat Sink ø 134mm

### Thermal Data

The thermal performance of a LED cooler, expressed as Thermal Resistance  $R_{th}$  in K/W (or °C/W) tells you how many degrees Kelvin (or Celsius) the base of the LED cooler will incline per Watt of dissipated power  $P_d$ .

This dissipated power  $P_d$  is the heat loss a LED package or LED COB/LOB will create besides the efficient light generation.

Typically for white LED packages the efficiency varies with the color CCT and the CRI – values here below can be taken as a rule of thumb for white LED packages (phosphor corrected blue light)

CCT 4000 - 7000 and CRI 70 - 80 → 35% efficiency → 65% heat loss

CCT 2700 - 3000 and CRI 85 - 97 → 30% efficiency → 70% heat loss

For other LED packages like horticulture specific wave lengths or UV, we recommend you to look up the thermal efficiency in the datasheet or contact the supplier.

Keep in mind that for horticulture LED packages, example 660nm Deep Red, the thermal losses are drastically lower and can be as low as 40%, meaning you could almost use double the electrical power  $P_e$  on the same LED cooler for the same temperature rise  $\Delta T$ .

Next the Thermal Resistance  $R_{th}$  is not a fix value – the nominal value we declare corresponds with a 50°C temperature rise – The table below explains the thermal resistance  $R_{th}$  for various dissipated power values.

In this way you can completely predict the temperature you are going to get in your LED luminaire.

Difficulties figuring it out – just let us know and our engineers will do the math for you.

$P_d = P_e \times (1-\eta_L)$			LED Light efficiency, $\eta_L$ (%)			Heat sink to ambient thermal resistance $R_{hs-amb}$ (°C/W)	
			17%	20%	25%	LSB13450	
Dissipated Power $P_d$ (W)	10	Electrical Power $P_e$ (W)	12.04	12.5	13.33	LSB13450	
	15		18.07	18.75	20	LSB13450	
	20		24.09	25	26.66	LSB13450	
	25		30.12	31.25	33.33	LSB13450	
	30		36.14	37.5	40	LSB13450	
	40		48.19	50	53.33	LSB13450	
	50		60.24	62.5	66.66	LSB13450	

Heat sink to ambient temperature rise  $T_{hs-amb}$  (°C)
